

1 SchemeIBMECH

This scheme is applicable to symmetric and asymmetric groups of prime orders.

1.1 SKGen(σ) \rightarrow ek_σ

generate $r \in \mathbb{Z}_p^*$
 $ek_\sigma \leftarrow \frac{d_{3,i}^{\eta+r\sigma}}{d_{4,i}^r}, \forall i \in \{1, 2, \dots, 8\}$
return ek_σ

1.2 RKGen(ρ) \rightarrow dk_ρ

generate $s, s_1, s_2 \in \mathbb{Z}_p^*$ randomly
 $k_1 \leftarrow \{g_2^{d_{1,i} \cdot (\alpha + s_1 \rho) - s_1 d_{2,i} + s d_{3,i}}, \forall i \in \{1, 2, \dots, 8\}\}$
 $k_2 \leftarrow \{g_2^{s_2 \cdot (\rho * d_{1,i} - d_{2,i}) + s d_{4,i}}, \forall i \in \{1, 2, \dots, 8\}\}$
 $k_3 \leftarrow (g_T^\eta)^s$
 $dk_\rho \leftarrow (k_1, k_2, k_3)$
return dk_ρ

1.3 Enc(ek_σ, rcv, m) \rightarrow ct

generate $z \leftarrow \mathbb{Z}_p^*$ randomly
 $C \leftarrow \{d_{1,i}^z, d_{2,i}^{z \cdot rcv} \cdot (ek_\sigma)_i, \forall i \in \{1, 2, \dots, 8\}\}$
 $C_0 \leftarrow (g_T^\alpha)^z m$
 $ct \leftarrow (C, C_0)$
return ct

1.4 Dec(dk_ρ, snd, ct) \rightarrow m

$m \leftarrow \frac{C_0 k_3}{\prod_{i=1}^8 e(C_i, k_{1,i} k_{2,i}^{snd})}$
return m
