1 SchemeIBMECH

This scheme is applicable to symmetric and asymmetric groups of prime orders.

1.1 SKGen $(\sigma) \rightarrow ek_{\sigma}$

generate
$$r \in \mathbb{Z}_r$$

$$ek_{\sigma} \leftarrow \frac{d_{3,i}^{\eta + r\sigma}}{d_{4,i}^r}, \forall i \in \{1, 2, \cdots, 8\}$$
return ek_{σ}

1.2 RKGen $(\rho) \rightarrow dk_{\rho}$

generate
$$s, s_1, s_2 \in \mathbb{Z}_r$$
 randomly $k_1 \leftarrow \{g_2^{\boldsymbol{d}_{1,i} \cdot (\alpha + s_1 \rho) - s_1 \boldsymbol{d}_{2,i} + s \boldsymbol{d}_{3,i}}, \forall i \in \{1, 2, \cdots, 8\}\}$
 $k_2 \leftarrow \{g_2^{s_2 \cdot (\rho * \boldsymbol{d}_{1,i} - \boldsymbol{d}_{2,i}) + s \boldsymbol{d}_{4,i}}, \forall i \in \{1, 2, \cdots, 8\}\}$
 $k_3 \leftarrow (g_T^{\eta})^s$
 $dk_{\rho} \leftarrow (k_1, k_2, k_3)$
return dk_{ρ}

1.3 $\operatorname{Enc}(ek_{\sigma}, rcv, m) \rightarrow ct$

generate
$$z \leftarrow \mathbb{Z}_r$$
 randomly $C \leftarrow \{d_{1,i}^z d_{2,i}^{z \cdot rcv} \cdot (ek_{\sigma})_i, \forall i \in \{1, 2, \cdots, 8\}\}$ $C_0 \leftarrow (g_T^{\alpha})^z m$ $ct \leftarrow (C, C_0)$ **return** ct

1.4 $\operatorname{Dec}(\operatorname{\textit{dk}}_{\rho},\operatorname{\textit{snd}},\operatorname{\textit{ct}}) \to m$

$$m \leftarrow \frac{C_0 k_3}{\prod\limits_{i=1}^8 e(C_i, k_{1,i} k_{2,i}^{snd})}$$
 return m
